Proposed Claim Amendment

1. (Currently Amended) A method performed by an operating system, comprising:
 - establishing a plurality of non-global operating system partitions within a global operating system environment provided by the operating system, wherein each non-global operating system partition serves to isolate processes running within that non-global operating system partition from other non-global operating system partitions within the global operating system environment, wherein enforcement of boundaries between the non-global operating system partitions is carried out by the operating system, wherein the non-global operating system partitions do not each have a separate operating system kernel executing therein, wherein the non-global operating system partitions each comprise a file system, and wherein each of the plurality of non-global operating system partitions comprises a particular non-global operating system partition;
 - associating the particular non-global operating system partition with a first resource pool comprising one or more resources;
 - ensuring that processes running within the particular non-global operating system partition are allowed to utilize only the resources in the first resource pool;
 - receiving a request to change the resource pool association for the particular non-global operating system partition to associate the particular non-global operating system partition with a second resource pool instead of the first resource pool, wherein the second resource pool is a different resource pool from the first resource pool, and wherein the second resource pool comprises one or more resources;
 - without terminating and restarting the processes running within the particular non-global operating system partition:
 - changing the resource pool association for the particular non-global operating system partition to cause the particular non-global operating system partition to be associated with the second resource pool instead of the first resource pool; and

ensuring that the processes running within the particular non-global operating system
partition are allowed to utilize only the resources in the second resource pool.

Support for these amendments may be found, for example, in paragraph [0026] of the Specification.
